

AMENDMENTS TO THE ABSTRACT

Please replace the Abstract with the attached revised Abstract located at the end of this document.

Abstract of the Disclosure

~~A device for exhausting in~~ An exhaust system for a vacuum cleaner is disclosed,
~~whose air exhaust filter which collects fine dusts contained in air exhausted to where~~
~~filtered air is directed outside of a~~ the main body of the vacuum cleaner can be easily
~~replaced, and which reduces a visual discomfort of a user by hiding the~~ through exhaust
holes ~~through which air is exhausted to outside of the main body. The device for~~
~~exhausting in a vacuum cleaner includes a main body (100) for suction and collecting of~~
~~various contaminants, formed in at least one of a plurality of supporting~~ wheels (160)
rotatably mounted at to both sides of the main body (100), ~~an exhaust flow passage~~
~~formed between the main body and the wheels, for discharging the air cleaned inside the~~
~~main body, and an air exhaust filter (161) provided at the exhaust flow passage for~~
~~filtering the fine dusts contained in the exhausted air once again. The disclosed exhaust~~
system provides an improved aesthetic appearance in a structurally efficient design.
